Manège at Colebrook Farm

Example image of proposed
Sand & Waxed fibre riding surface:

Advantages:

- Free draining to avoid freezing in extreme low temperatures.
- Horses travel freely over the surface as synthetic fibres act as a ‘root structure’ similar to the best turf.
- Does not blow away as easily as sand, and so is less dusty for the horse’s health.
- Provides a secure and forgiving surface that will reduce repetitive strain injury.
- Consists of a waxed, multi-washed silica sand, polypropylene, polyester and elastic fibre blend
- Requires no watering. Dust free.
