
Fit the bow top fencing as per the below specification inside the concrete edging between the grass and pavement edging. Black line within the highlighted line above.

Fit from the end of the property frontage and along the grassed area to the end at the neighbouring property plot 98. Leaving a 2 foot gap at the end to have the grass removed and grey slated to support the neighbouring property with opening car doors and reduce the need for maintenance.

A 1 metre gate to the same bow top sec and height will be installed where the temporary property path and gate is and once the garage is returned and side access available this will be used to access the grassed areas for maintenance with the property temporary gate being removed and panelled.
