- Proposed Stone Walls
- Post & Rail Fencing

NOTES:

- All trees to be double staked.

- Tree species within housing areas and along streets primarily comprise cultivars where conditions are challenging, space for roots and/or canopy is restricted or greater species variety is desired.

- *Fagus sylvatica* (Beech) hedging to be planted in a single row, 5 plants lin/m. Beech hedging to be staked and protected with a shrub shelter (Tubex or similar approved). Beech hedging used in areas to help soften parking bays and private driveways as it provides year round leaf cover and seasonal interest.

- *Ilex crenata 'Caroline Upright'* hedging to be planted in a single row, 5 plants lin/m. Ilex hedging used along main streets to provide formal, evergreen structure.

- Mixed native hedging to be planted double staggered, 5 plants lin/m. Hedging to be staked and protected with a shrub shelter (Tubex or similar approved). Mixed native heging used along the northern boundary to provide a sympathetic edge to the surrounding countryside and in other key areas around the scheme where space allows. Species used are thornless and appropriate for planting close to dwellings under NHBC guidance.

- Acer campestre hedging to be planted in a single row, 5 plants lin/m. Hedging to be staked and protected with a shrub shelter (Tubex or similar approved). Acer campestre hedging used where space allows to provide a sense of rural character across the scheme.

- Planting bed mixes to be set out in single species groups of 3, 5 or 7 plants where appropriate and randomised to avoid patterns.
