The above structure will fit between the 2 walls of the photograph above in the recess. It is 1.8 metre deep and will not protrude in front of the front wall of the existing house.

The existing canopy above the front door will be removed and the lower part of the window on the right will be bricked up and a new window installed. It will have UPVC double glazed glass for the front windows. The roof slopes from 2.1 metre at the front to 2.4 metre at the rear wall.
