This drawing has been prepared in accordance with BS 5837:2012.

This drawing is intended to be printed and used in colour only, and for no purpose other than the consideration of trees in accordance with BS 5837.

BS5837:2012 Cascade chart for tree quality assessment

Category & Definition	Criteria (including subcategories where appropriate)			Identification on plan
Trees unsuitable for retention				
Category U	Trees that have a serious, irremediable, structural defect, such that their early loss is expected due to collapse within 10 years, or which will become unviable after removal of other trees in the category due to their recent or future loss of shelter. Trees infected with pathogens of significance to the health and/or safety of other trees nearby, or very low quality trees suppressing adjacent trees of better quality. A tree included only for reasons of poor form or storm damage is unlikely to be suitable for category U trees. Trees that are dead or are showing signs of significant, immediate, and irreversible overall decline. Trees infected with pathogens of significance to the health and/or safety of other trees nearby, or very low quality trees suppressing adjacent trees of better quality. A tree included only for reasons of poor form or storm damage is unlikely to be suitable for category U trees. Trees with little existing or potential conservation value which it might be desirable to preserve			Red on plan RGB 127,0,0
Trees to be considered for retention		2. Mainly landscape qualities	3. Mainly cultural values, including conservation	
Category A	Trees that are particularly good examples of their species, or such that they would be very difficult to replace	Trees, groups or woodlands of particular visual importance as arboricultural and/or landscape features	Trees, groups or woodlands of significant conservation, historical, commemorative or other value (e.g. veteran trees or wood pasture)	Light Green RGB 0,255,0
Category B	Trees of moderate quality with an estimated remaining life expectancy of at least 20 years	Trees that might be included in category A but are downgraded because of impaired condition (e.g. presence of significant but remediable defects, including unsympathetic past management and storm damage), such that they are unlikely to be suitable for retention for beyond 40 years; or trees in very good condition and with no material defects, but are downgraded because of their collective impact and/or screening benefits to the wider locality	Trees present in numbers, usually growing as groups or woodlands, such that they attract a higher collective rating than they might merit as individuals (or it is desirable to group them because of their collective landscape or cultural values, or trees occurring as collectives but situated so as to make little material contribution to the wider locality	Trees with material conservation or other cultural value	Mid Blue RGB 0,0,255
Category C	Trees of low quality with an estimated remaining life expectancy of at least 10 years, or young trees with a stem diameter below 150 mm	Unremarkable trees of very limited merit or such impaired condition that they do not qualify in higher categories	Trees present in groups or woodlands, but without this conferring on them significantly greater collective landscape value; and/or trees separated from surrounding or adjacent trees in better condition or woodlands	Trees with no material conservation or other cultural value	Grey RGB 191,191,191
