For the attention of Alfia Cox

Your Ref: AVA/2026/0500
Our ref: DWTAVA2427

21st October 2026

Dear Alfia,

Proposal: Change of use of substation to Use Class E with associated internal and external alterations

Location: Substation Derby Road Milford Belper Derbyshire

Application Ref No.: AVA/2026/0500

With reference to the above application, I am responding as the Biodiversity Planning Officer responsible for work relating to the Service Level Agreement, which the Amber Valley Borough Council and the Trust have signed. The following comments are aimed at providing accurate and up to date information on the nature conservation issues associated with the proposed development.

Response

We have reviewed the submitted information and understand the application pertains to the change of use of a substation to a commercial business with associated internal and external alterations.

Although the proposals are small in scale, they include replacing the bitumen roof beneath the parapet and carrying out internal works. Several bat roosts are known

to be nearby and therefore the development has potential to negatively impact roosting bats.

It is considered that the application as submitted is not accompanied by sufficient information to demonstrate the presence or otherwise of protected species and the extent that they may be affected by the proposed development. In the absence of sufficient information on European Protected Species (i.e. roosting bats) the Local Planning Authority is unable to discharge its duty in respect of the requirements of the Conservation of Habitats and Species Regulations 2019 (Amendment) (EU Exit).

It is recommended as a minimum that a Preliminary Bat Roost Assessment is undertaken prior to determination by a suitably qualified ecologist. Any evidence of nesting bird activity should also be recorded. This survey can be undertaken any time of the year, and no works of any kind should be undertaken to the building until this assessment has been undertaken, and a decision has been made by the LPA.

Paragraph 99 of Circular 06/2005 states "*it is essential that the presence or otherwise of protected species, and the extent that they may be affected by the proposed development, is established before planning permission is granted, otherwise all material considerations may not have been addressed in making the decision. The need to ensure ecological surveys are carried out should therefore only be left to coverage under planning conditions in exceptional circumstances*".

The results of the assessment should be presented in accordance with current guidelines, such as Ecological Report Writing (CIEEM, 2019) and Bat Conservation Guidelines (Collins, 2023). The report should make clear the requirement for any further survey work and it should be noted that if further survey is required, this should be undertaken prior to determination of the planning application. These surveys will need to be undertaken at the appropriate time of year, in line with

the good practice guidelines (Collins, J. (ed.) (2023) Bat Surveys for Professional Ecologists: Good Practice Guidelines 4th Edition. Bat Conservation Trust). The report should include any requirement for licensing and details of mitigation and enhancement measures appropriate to the site.

It is hoped that the information provided is helpful to the Council. If you require any further information or wish to discuss any of the comments made, please do not hesitate to contact me.

Yours sincerely,

Holly Fowler
